 group

## Familiar with how the printing components interact ...

What your customers want is crystal clear: brilliant print results. What you as a printer also want: to deliver what's demanded of you quickly, reliably and inexpensively. As a rule, you succeed in doing precisely that, because your printing components work together without any problems (we don't develop our auxiliaries and additives in parallel with our inks just for the fun of it!). To cover the exceptions to this rule, we will from now on be offering you additional service packages that you can call upon whenever you need them: Under the motto

“Service that helps you get on”.

Make the most of these value added services.  
Just ask us about our terms.

**Our printing related services ...**

**Water and fount solution analyses**

and training courses on measurement methods and the generation and interpretation of measured values, so that you can respond quickly and correctly when problems arise.

**Assistance**

in selecting the right fount solution additive to solve your printing problems, optimise your printing process and obtain the best possible results even when special requirements are being set.

**Technical support**

and advice when you change over to alcohol-free or reduced-alcohol printing or when you experience difficulties when printing without any alcohol at all.

**Inspection**

of fount solution systems and support when cleaning fount solution circulation systems in order to improve your productivity.

**... and general services:**

**Basic and advanced training by our INK ACADEMY**

**Environmental protection and industrial safety**

**Inventory management per software: HOT® – HIT ORDER TRANSFER**

You can find out “more” from our special brochure entitled “Services”, which you can request either directly from your contact or over the Internet under: [www.hubergroup.de](http://www.hubergroup.de)

... and formulated to ensure harmony

and a state of equilibrium

Our fount solution additives stand out thanks to their high degree of compatibility with different printing inks and configurations, and they are renowned for the fact that a stable ink/water balance can be formulated very quickly with them. And it goes without saying that they harmonise particularly well with those inks that originate from our own R&D labs. This is because the aspirations are identical and so too the equally high standard of technology and production that has evolved over the past decades. This is precisely the “humus” on which consistently high quality flourishes.

All relevant data on our fount solution systems can be found in our TECHNICAL INFORMATION sheets, which you can either order as hardcopies from your contact or download from our website under [www.hubergroup.de](http://www.hubergroup.de).

#### Sheet-fed offset - packaging and commercial

##### **COMBIFIX®**

our classic additive for printing with alcohol in the fount solution, available in different formulations

##### **SUBSTIFIX®**

for reduced-alcohol and alcohol-free printing, available in different formulations

#### Web offset coldset

##### **HYDROFIX® Z**

available in various formulations for different dampening systems and press configurations

##### **HYDROFIX® N**

for printing in the neutral pH band

#### Web offset heatset

##### **REDUFIX®**

for reduced-alcohol and alcohol-free printing, available in different formulations

#### Speciality products

##### **DIRECT FLUID®**

for small-format offset printing with direct-film dampening systems

##### **SALINOFIX®**

for targeted adjustment of the total hardness of demineralised water

# Reliable, top-quality printing ...

## Commercial
